According to our (Global Info Research) latest study, the global Vacuum Bag Film Material market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Vacuum bag film is a multi-layer composite special film, which refers to a process auxiliary material that is cured and molded using composite material components. It is a film material that can form and maintain a vacuum state under certain environmental conditions. The function of the vacuum bag film is to form a vacuum system. Vacuum bag film has high strength and high elongation, and can directly contact resin. It is mainly used for normal temperature molding, vacuum injection and pre-compaction of composite materials. According to the product process, it can be divided into dry vacuum bag technology bag film and wet vacuum bag technology bag film. According to product material classification, vacuum bag film raw materials are usually divided into nylon-6 or nylon-66.

Vacuum bag film can provide good coverage, barrier properties, temperature resistance and good mechanical properties. Vacuum bag films are currently widely used in the production of large components such as wind energy power generation and aerospace, and have good prospects.
