## Abstracts

The global Vacuum Bag Film Material market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Vacuum bag film can provide good coverage, barrier properties, temperature resistance and good mechanical properties. Vacuum bag films are currently widely used in the production of large components such as wind energy power generation and aerospace, and have good prospects.

Vacuum bag film is a multi-layer composite special film, which refers to a process auxiliary material that is cured and molded using composite material components. It is a film material that can form and maintain a vacuum state under certain environmental conditions. The function of the vacuum bag film is to form a vacuum system. Vacuum bag film has high strength and high elongation, and can directly contact resin. It is mainly used for normal temperature molding, vacuum injection and pre-compaction of composite materials. According to the product process, it can be divided into dry vacuum bag technology bag film and wet vacuum bag technology bag film. According to product material classification, vacuum bag film raw materials are usually divided into nylon-6 or nylon-66.
