## Abstracts

According to our (Global Info Research) latest study, the global Vacuum Bagging Release Film market size was valued at USD 181.1 million in 2022 and is forecast to a readjusted size of USD 339.2 million by 2029 with a CAGR of 9.4% during review period.

Release fabric is a process auxiliary material for the molding and curing process of composite material components. It is also a material placed between the mold and the blank part to prevent the resin from adhering to the mold. Release fabric is mainly used for demoulding or as a peeling layer during the molding process of composite materials. In addition to good release properties, Release fabric can also provide composite products with a rough and clean surface that meets the requirements to facilitate subsequent processing. Release fabric is generally between the product and other vacuum accessories. Its main purpose is to facilitate other vacuum accessories to be easily torn off the product after the product is cured.
