The global Vacuum Boiling Cleaning Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Vacuum boiling cleaning machine is a cleaning equipment mainly used for cleaning pipelines, containers, and other equipment in industrial equipment. It utilizes the boiling principle of water and reduces its boiling point by reducing pressure, allowing water to boil at low temperatures, generating a large number of bubbles and eddies, thus achieving the purpose of cleaning. Decompression boiling cleaning machines typically have various functions such as heating, depressurization, circulation, and filtration, which can effectively remove sediment, dirt, and bacteria inside the equipment, thereby improving the cleanliness and production efficiency of the equipment. Vacuum boiling cleaning machines are widely used for equipment cleaning in industries such as chemical, pharmaceutical, and food.
