Abstracts

A Vacuum Capacitors is a variable capacitor which uses a high vacuum as the dielectric instead of air or other insulating material. This allows for a higher voltage rating using a smaller total volume. There are several different designs in vacuum variables. The most common form is inter-meshed concentric cylinders, which are contained within a glass or ceramic vacuum envelope, similar to an electron tube. A metal bellows is used to maintain a vacuum seal while allowing positional control for the moving parts of the capacitor.

SCOPE OF THE REPORT:

This report focuses on the Vacuum Capacitors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global vacuum capacitor market is one of the steady growth capacitor markets. Vacuum capacitors are used across a wide range of industries, especially in impedance matching networks for radio-frequency (RF) generators. Semiconductor manufacturing equipment, flat panel display manufacturing, and broadcasting equipment are some of the major application areas of these capacitors. Vacuum variable capacitors contribute a larger share to the revenue of the market as compared to vacuum fixed capacitors.

The worldwide market for Vacuum Capacitors is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
