Abstracts

Vacuum coating processes use vacuum technology to create a sub-atmospheric pressure environment and an atomic or molecular condensable vapor source to deposit thin films and coatings. The vapor source may be from a solid or liquid surface (physical vapor deposition - PVD), or from a chemical vapor precursor (chemical vapor deposition - CVD).

Vacuum coating machine is a kind of machine applied for vacuum coating process.

Scope of the Report:

This report focuses on the Vacuum Coating Machines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the coming years there is an increasing demand for vacuum coating machines in the regions of North America and Europe that is expected to drive the market for more advanced vacuum coating machines.
