According to our (Global Info Research) latest study, the global Vacuum Concentrator Tank market size was valued at US\$ 51.4 million in 2024 and is forecast to a readjusted size of USD 56.4 million by 2031 with a CAGR of 0.6% during review period.

Vacuum concentrator tank is a kind of equipment used to concentrate liquid materials, mainly for low-temperature concentration of heat-sensitive or high-viscosity materials under vacuum conditions. By reducing the pressure of the working environment (i.e. creating a vacuum), the material can be evaporated and concentrated at a lower temperature, thus avoiding the destruction of the active ingredients of the material by high temperatures. This kind of equipment is widely used in food, pharmaceutical, chemical and other fields.
