The global Vacuum Contactors and Starters market size is expected to reach \$ 5315.5 million by 2029, rising at a market growth of 7.0% CAGR during the forecast period (2023-2029).

A vacuum contactor is a sealed environment where electrical contacts can make or break a connection between a power source and load inside a vacuum bottle. The vacuum provides a safe, clean environment where the arc can be contained and contaminants avoided.

The main function of a vacuum contactor is simply to make and break the connection between the power source and the load. One side of contactor is fixed and the other is movable. Once energized, the generated electromagnetic force pulls the movable contact toward the stationary contact and the spring pulls the contactors apart once de-energized. In a vacuum contactor, this process is contained within a vacuum bottle, which can contain the arc and keep contaminants outside.

This report studies the global Vacuum Contactors and Starters production, demand, key manufacturers, and key regions.
