## Abstracts

The global Vacuum Degasser market size is expected to reach \$ 518 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

Vacuum Degassers is a kind of device used in drilling to remove gasses from drilling fluid which could otherwise form bubbles. The form of vacuum degasser can be horizontal, vertical or round vessel. A vacuum action is created to pull in the gas cut mud. When the liquid enters the tank it will flow and be distributed to a layer of internal baffle plates designed for the mud to flow in thin laminar film and is exposed to a vacuum that forces the gas to escape and break out of the mud. The vacuum pump moves the escaping gas from the vessel discharging it to the rig's flare or environmental control system. Nowadays, vacuum degassers are very specific products for their detailed utility on different area, their sizes and capacities are quite different from each other.

Global Vacuum Degasser key players include M-I Swaco, Reflex, IMI(Hydraulic Engineering), Spirotech, etc. Global top four manufacturers hold a share over 65%.

Europe is the largest market, with a share about 30%, followed by China, and North America, both have a share over 45 percent.

In terms of product, Commercial Vacuum Degasser Tank is the largest segment, with a share over 65%. And in terms of application, the largest application is Heating, Chilled Water and Solar Systems, followed by Oil and Gas Mining, etc.
