According to our (Global Info Research) latest study, the global Vacuum Degasser market size was valued at US\$ 420 million in 2024 and is forecast to a readjusted size of USD 506 million by 2031 with a CAGR of 2.7% during review period.

Vacuum Degassers is a kind of device used in drilling to remove gasses from drilling fluid which could otherwise form bubbles. The form of vacuum degasser can be horizontal, vertical or round vessel. A vacuum action is created to pull in the gas cut mud. When the liquid enters the tank it will flow and be distributed to a layer of internal baffle plates designed for the mud to flow in thin laminar film and is exposed to a vacuum that forces the gas to escape and break out of the mud. The vacuum pump moves the escaping gas from the vessel discharging it to the rig's flare or environmental control system. Nowadays, vacuum degassers are very specific products for their detailed utility on different area, their sizes and capacities are quite different from each other.

Global Vacuum Degasser key players include M-I Swaco, Reflex, IMI(Hydronic Engineering), Spirotech, etc. Global top four manufacturers hold a share over 65%.
