Vacuum degreasing service is a cleaning process used to remove grease, oil, and other contaminants from various parts and components. It involves placing the parts in a vacuum chamber and subjecting them to a combination of heat, vacuum, and solvent vapor. The vacuum helps to remove air and moisture from the chamber, while the heat and solvent vapor dissolve and remove the contaminants from the parts. This process is commonly used in industries such as automotive, aerospace, and manufacturing to ensure that parts are thoroughly cleaned before further processing or assembly.
