Vacuum Generator Circuit Breaker (VGCB) is a specialized type of circuit breaker that uses vacuum technology to interrupt high fault currents, specifically designed for protecting large generators and high-power applications. Unlike conventional circuit breakers, VGCBs extinguish the arc created during a fault in a vacuum chamber, where the lack of gas molecules prevents arc formation, making the interruption process faster, safer, and more efficient. This capability makes VGCBs well-suited for high-voltage and high-current applications, such as in power plants and industrial facilities.
