According to our (Global Info Research) latest study, the global Vacuum Granulating Machine market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A vacuum granulating machine is a type of equipment used in the pharmaceutical, chemical, and food industries for granulating and drying materials. It is designed to create granules from powders or other materials by using a vacuum to remove moisture and air from the product.

The machine consists of a cylindrical chamber with a rotating impeller or blade inside. The material to be granulated is fed into the chamber, and the impeller rotates at high speed, causing the material to be thrown against the chamber walls. This action breaks up the material into small particles and creates granules.

The vacuum system in the machine helps to remove moisture and air from the product during the granulation process. This is important for maintaining the quality and stability of the granules. The vacuum also helps to reduce the drying time required for the granules.

Vacuum granulating machines are commonly used for granulating and drying materials such as pharmaceutical powders, chemicals, fertilizers, and food ingredients. They are preferred in industries where the granules need to have a uniform size, good flowability, and high density.

The global market for vacuum granulating machines is expected to experience

significant growth in the coming years. Vacuum granulating machines are widely used in various industries such as pharmaceuticals, chemicals, food processing, and agriculture, among others.

One of the key drivers of the market is the increasing demand for granulated products in various industries. Granulation is a process that involves the formation of granules from powders or other solid materials. Granulated products offer several advantages such as improved flowability, reduced dust formation, and enhanced product stability. This has led to a growing demand for vacuum granulating machines, which are used to produce high-quality granules.

Another factor driving the market is the increasing focus on process efficiency and automation. Vacuum granulating machines offer several advantages over traditional granulation methods, such as better control over the granule size and shape, reduced drying time, and improved product quality. These machines are also equipped with advanced features such as automatic feeding, mixing, and granule formation, which help in improving the overall process efficiency.

The market is also driven by the increasing adoption of vacuum granulating machines in the pharmaceutical industry. Vacuum granulation is widely used in the production of pharmaceutical tablets and capsules. The process helps in improving the flowability and compressibility of the granules, which in turn leads to better tablet/capsule quality. With the growing demand for pharmaceutical products, the demand for vacuum granulating machines is expected to witness significant growth.

However, the market is also facing certain challenges that may hinder its growth. One of the key challenges is the high cost associated with vacuum granulating machines. These machines are relatively expensive compared to traditional granulation methods, which may limit their adoption, especially among small and medium-sized enterprises.

Furthermore, the market is highly competitive, with several players operating in the market. Manufacturers are focusing on product innovation and technological advancements to gain a competitive edge. They are also expanding their product portfolios to cater to the diverse needs of different industries.

In terms of regional analysis, Asia Pacific is expected to dominate the market due to the presence of a large number of pharmaceutical and chemical manufacturing companies in countries like China and India. North America and Europe are also expected to witness significant growth due to the increasing adoption of vacuum granulating

machines in the pharmaceutical and food processing industries.
