According to our (Global Info Research) latest study, the global Vacuum Gun market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A vacuum gun is a power tool for drying and cleaning. It uses compressed air to suction dust such as debris generated during work. Since it has a cylindrical shape with no protrusions, it is resistant to clogging and can generate powerful suction. It is highly convenient because it can be held and worked with one hand.

Some vacuum guns are marketed as blower vacuum guns, which combine a vacuum gun and a blower gun in a single unit and can be used for blowing by changing the direction of the nozzle. Since the nozzle cannot be used alone, it must be used with a high-pressure air hose or air compressor.
