According to our (Global Info Research) latest study, the global Vacuum Insulation Panels for Buildings market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The vacuum insulation panels used in buildings are derived from space technology. They are environmentally friendly, efficient, and energy-saving. They are the most advanced high-efficiency insulation materials in the world. The core material and the getter are used as the filling material, and the composite gas barrier film is used as the wrapping material, and the plate-shaped material for building insulation is made by molding, packaging, vacuuming and other processes. Its products effectively avoid air convection, radiation, and heat conduction, and the thermal conductivity is greatly reduced, and the minimum can reach below 0.002w/m.k; it does not contain any ODS (ozone depleting substances) materials.
