The global Vacuum Insulation Panels for Buildings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The vacuum insulation panels used in buildings are derived from space technology. They are environmentally friendly, efficient, and energy-saving. They are the most advanced high-efficiency insulation materials in the world. The core material and the getter are used as the filling material, and the composite gas barrier film is used as the wrapping material, and the plate-shaped material for building insulation is made by molding, packaging, vacuuming and other processes. Its products effectively avoid air convection, radiation, and heat conduction, and the thermal conductivity is greatly reduced, and the minimum can reach below 0.002w/m.k; it does not contain any ODS (ozone depleting substances) materials.

This report studies the global Vacuum Insulation Panels for Buildings production, demand, key manufacturers, and key regions.
