According to our (Global Info Research) latest study, the global Vacuum and Mop Combo market size was valued at USD 129.6 million in 2023 and is forecast to a readjusted size of USD 885.4 million by 2030 with a CAGR of 31.6% during review period.

Unlike vacuum cleaners which collect dry dirt and debris, or robot mops which just push a dirty cleaning pad around your floor for a while, mop vacs (also called “vacmops” or “wet-dry vacuum cleaners”) suck up dirt and debris while also mopping hard floors with a constant supply of fresh water and cleaning solution. The fresh water comes from the machine’s fresh water tank and works with a rotating soft brush roller to mop the floor. In the same pass, the mop vac sucks the used water back into a separate dirty water tank where it filters out any solid debris.
