The global Vacuum Parallel Concentration Analyzer market size is expected to reach \$ 677 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

The vacuum parallel concentration analyzer is a laboratory device that uses vacuum technology to perform efficient concentration processing at multiple sample locations simultaneously. It is commonly used in the fields of biomedicine, environmental analysis, food testing, etc. The instrument reduces the internal pressure of the system to allow the solvent to evaporate rapidly at a lower temperature to avoid the degradation of heat-sensitive components. At the same time, it can achieve simultaneous concentration of multiple samples, improve experimental efficiency and reproducibility, and is one of the key concentration tools in the sample pretreatment process.
