Abstracts

The global Vacuum Suction Cups market size is expected to reach \$ 1178 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

A vacuum suction cups are the link between the workpiece and the handling system. They consist of the suction cup (elastomer part) and a connecting element.

Suction cups are used to grip and move workpieces in a plant or on a robot. A suction cup does not attach itself to the surface of a workpiece. Instead, the ambient air pressure (atmospheric pressure) presses the suction cup against the workpiece as soon as the ambient pressure is greater than the pressure between the suction cup and the workpiece. This pressure difference is achieved by connecting the suction cup to a vacuum generator, which evacuates the air from the space between the cup and the workpiece. If the suction cup is in contact with the surface of the workpiece, no air can enter it from the sides and a vacuum is generated.

The market for Vacuum Suction Cups is highly fragmented with players such as SMC Corporation, Schmalz, Aventics, PISCO, Piab, Festo, DESTACO (Dover), Myotoku, VMECA, ANVER, FIPA, Coval and VUOTOTECNICA, etc, with about 64% market shares.
