According to our (Global Info Research) latest study, the global Vacuum Suction Pads market size was valued at USD 665.3 million in 2023 and is forecast to a readjusted size of USD 989.7 million by 2030 with a CAGR of 5.8% during review period.

A vacuum suction pads are the link between the workpiece and the handling system. They consist of the suction cup (elastomer part) and a connecting element. Suction cups are used to grip and move workpieces in a plant or on a robot. A suction cup does not attach itself to the surface of a workpiece. Instead, the ambient air pressure (atmospheric pressure) presses the suction cup against the workpiece as soon as the ambient pressure is greater than the pressure between the suction cup and the workpiece. This pressure difference is achieved by connecting the suction cup to a vacuum generator, which evacuates the air from the space between the cup and the workpiece. If the suction cup is in contact with the surface of the workpiece, no air can enter it from the sides and a vacuum is generated.

Global key players of Vacuum Suction Pads include SMC Corporation, Schmalz, Aventics (Emerson), PISCO, Piab, Festo and DESTACO (Dover), etc. Top three players occupy for a share about 50%.
