The global Vacuum Switch Tubes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Vacuum interrupter also known as vacuum switch tube, is the core component of high voltage power switch. Its main function is to cut arc off through excellent insulation of vacuum in high voltage circuit and restrain current quickly to avoid accidents and danger. It is mainly used in electric power transmission and distribution control system, also used in metallurgy, mining, petroleum, chemical industry, railways, broadcasting, communications, industrial high frequency heating power distribution system. It is characterized by energy saving, material saving, fire prevention, explosion proof, small volume, long life, low maintenance cost, reliable operation and non-pollution. Vacuum interrupter can be divided into two kinds, one for circuit breakers and the other for load switch. The vacuum interrupter for circuit breaker is mainly used for substation and power grid facilities in the power sector, and vacuum interrupter for load switch is mainly used for end users of the power grid.
