Abstracts

Vaginal anti-infectives are the type of agents that are used for the killing or suppressing the infection of vagina caused by numerous bacteria, virus, fungi or micro-organism. These bacteria and others invade the host by means of its replication or releasing several toxins into the host. 'Yeast' infections, trichomoniasis vaginitis, bacterial vaginosis, chlamydia vaginitis, and viral vaginitis are the major forms of vaginitis. About one third women all over the world experience indications of vaginitis at some point in their lifetime. Women are highly prone to vaginitis during the reproductive age; a change in the balance of bacteria and yeast present in vagina can lead to vaginitis.
