Abstracts

According to our (Global Info Research) latest study, the global Valve Gate System market size was valued at US\$ 1251 million in 2025 and is forecast to a readjusted size of US\$ 1638 million by 2032 with a CAGR of 3.9% during review period.

Valve-type gating systems are a precision form of hot runner systems that control the opening and closing of the gates through the mechanical movement of a valve needle at predetermined times. They allow for manual control of the opening and closing times of each gate, achieving flow balance, eliminating weld lines, and improving surface quality. They are widely used in high-requirement injection molding fields such as automotive precision parts, medical products, and electronic components.

Upstream industries mainly include suppliers of high-temperature materials such as TZM alloys, heating rods and thermocouples, temperature controllers, valve needle drive devices (hydraulic/pneumatic cylinders), and timing controllers. Downstream industries cover automotive manufacturing (lighting, interior and exterior trim), medical technology (high-cleanliness parts), electronics, and packaging, with automotive applications being the most widespread.

The global unit price of a valve-type gating system is US\$1239, with annual sales of approximately 981,500 units and a global production capacity of 1.2 million units. The industry profit margin is 20%.
