Abstracts

The global Valve Positioners market size is expected to reach \$ 2286 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

A valve positioner is a device that adjusts the valve actuator's position based on a control signal.

Valve positioners compare a control signal to a valve actuator's position and move the actuator accordingly. They are used with both linear valves and rotary valves. Valve positioners are used when the 0.2 to 1 bar pressure in the diaphragm chamber is not able to cope with friction and high differential pressures.

The positioner is fitted to the yoke of the actuator and is linked to the spindle of the actuator by a feedback arm in order to monitor valve position. When a control signal differs from the valve actuator's position, the valve positioner sends the necessary power to move the actuator until the correct position is reached. This uses a high air supply.

Positioners should be installed if the valve is intended for use in a control application. Global Valve Positioners key players include Emerson, Flowserve, Siemens, etc. Global top three manufacturers hold a share about 35%.

Europe is the largest market, with a share about 20%, followed by North America and China, both have a share about 40 percent.

In terms of product, Pneumatic is the largest segment, with a share over 45%. And in terms of application, the largest application is Oil and Gas, followed by Chemical,

Pharmaceutical manufacturing, etc.
