The global Valve Tappet For Automobile Engine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Valve Tappet is composed of two parts: the valve train and the valve train, and the lifter is a major component of the valve train except the camshaft. The tappet is the follower of the cam. Its function is to transmit the motion and force from the cam to the push rod or valve, and at the same time bear the lateral force exerted by the cam and transmit it to the body or cylinder head. The tappet can be divided into two major categories of mechanical tappets and hydraulic tappets, each of which has a variety of structural forms such as plane tappets and liquid tappets.
