Abstracts

Valves is a mechanical device that regulates, directs or controls the flow of a fluid (gases, liquids, fluidized solids, or slurries) by opening, closing, or partially obstructing various passageways. There are many types of valve, including stop (isolation) valves, regulating valves, back-flow prevention valves, pressure-relief valves and so on. They are majorly used in water controlling for irrigation as well as industrial, military, commercial, residential, and transport sectors. Such as drip irrigation and sprinkler irrigation, oil and gas, power generation, mining, water reticulation, sewage and chemical manufacturing.

Different types of valves are available: gate, globe, plug, ball, butterfly, check, diaphragm, pinch, pressure relief, control valves etc. Each of these types has a number of models, each with different features and functional capabilities. Some valves are self-operated while others manually or with an actuator or pneumatic or hydraulic is operated. In the report, it includes all kinds of valves.

Scope of the Report:

This report focuses on the Valves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

For industry structure analysis, the valves industry is fragmented. A variety of manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top 10 producers account for less than 30% of the revenue market. Regionally, North America is the biggest production area of valves, also the leader in the whole valves industry. Europe and China also produce large amount of valves per year.

For price trend analysis, a key variable in the performance of valves producers is raw material costs, specifically the speed at which any increase can be passed through to customers. The price of the major raw material varies according to the steel price. This year, as the downturn of global steel industry, the valves price would keep decreasing for at least the following 5 years.

For forecast, the global valves revenue would keep increasing with annual growth rate with 1~2%, and a little higher speed in China. We tend to believe that this industry still has a bright future, considering the current demand of valves. As for product prices, the slow downward trend in recent years will continue in the next few years, as competition intensifies. Similarly, there will be fluctuations in gross margin.

The worldwide market for Valves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
