Abstracts

The global Vanadium Pentoxide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In recent years, with the development of the steel industry, the market demand for vanadium pentoxide has continued to rise. In 2021, the apparent consumption of vanadium pentoxide in my country will reach 136,000 tons. The output of vanadium pentoxide is related to vanadium ore. my country is rich in vanadium ore resources. According to USGS data, in 2021, the output of China's vanadium ore industry will be 73,000 tons, accounting for 66.4% of the world's total output, ranking first in the world. In 2020, due to the impact of the new crown epidemic, international steel production will be greatly impacted, and the international demand for vanadium pentoxide will decline. In order to expand the market, overseas companies will actively deploy the domestic market. The volume is higher than the export volume. But on the whole, except for 2020, my country's vanadium pentoxide import and export market has been in a state of trade surplus for a long time. According to the data from the General Administration of Customs, from January to June 2022, my country's vanadium pentoxide export volume is 2503.3 tons , the import volume was 120.2 tons.

Vanadium pentoxide, the IUPAC name is vanadium (V) oxide, is the oxide of vanadium (V), and its chemical formula is V_2O_5 . It is a toxic orange-yellow solid, slightly soluble in water, and decomposes when heated by losing oxygen. It can be used as a catalyst in the chemical industry. The most important thing is to catalyze the one-step conversion of sulfur dioxide into sulfur trioxide in the sulfuric acid industry. Vanadium (+5) in vanadium pentoxide is the highest oxidation state and has amphoteric and oxidizing properties.
