Abstracts

Vanadium redox battery is a secondary battery that uses liquid electrolyte instead of electrolyte plates for storing energy. These batteries are used in energy storage systems as a replacement for standard batteries such as lead-acid and lithium-ion (Li-ion) batteries. These batteries provide a minimum of 25 years of service without any maintenance, which gives vanadium redox batteries an edge over other battery technologies.

SCOPE OF THE REPORT:

This report focuses on the Vanadium Redox Battery in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. To encourage the use of renewable power, governments of various countries support renewable energy production by providing grants, incentives, feed-in tariffs, and others. As renewable sources of energy such as solar, wind, and hydro are intermittent in nature, they have less potential as a standalone power system. To overcome this issue, the renewable sources are combined and used in a hybrid form to supply continuous, reliable power, which is proven to be beneficial in remote areas, especially in the telecom industry where it is adopted extensively.

The worldwide market for Vanadium Redox Battery is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
