The global Vapor Chamber market size is expected to reach \$ 1375.8 million by 2029, rising at a market growth of 7.9% CAGR during the forecast period (2023-2029).

The major players in global vapor chamber market include Auras, CCI, Jentech, etc. The top 3 players occupy about 50% shares of the global market. China is the main market, and occupies about 58% of the global market. Ultra thin vapor chamber is the main type, with a share about 95%. Phone is the main application, which holds a share about 90%.

A vapor Chamber is a planer heat pipe, which can spread heat in two dimensions. They are typically used in high heat flux applications, or when two-dimensional spreading is required. Vapor Chamber technology enables higher CPUs with a higher TDP (or overclocked state) to be efficiently and effectively cooled to safe operating temperatures, extending component and product life. Vapor chamber features a wick design that filled with coolant. When heated, the coolant changes phase from a liquid to a gas and back again to transfer heat.
