Variable frequency constant pressure water supply equipment is a water supply system equipment that combines variable frequency speed regulation and constant pressure control technology. It consists of a frequency converter, a motor, a constant pressure controller, a water pump, a sensor, a control panel and a safety protection device. The variable frequency constant pressure water supply equipment controls the speed of the water pump motor through the frequency converter, and adjusts the running speed of the water pump according to the real-time water pressure demand. It is widely used in water supply systems of buildings, water supply equipment in industrial production, and ships that require stable water supply. They can effectively improve the stability and reliability of the water supply system and realize intelligent management and precise control of the water supply system.
