Abstracts

Variable frequency drive is a device used for controlling the frequency and voltage that is supplied to the motor, based on the application need and requirements. Variable frequency drives provide motion control and reduce the power use, as they regulate the motors and supply only the required voltage, thereby reducing power consumption. The global variable frequency drives market is segmented into the following power ratings: less than 1000 kW and greater than 1000 kW.

SCOPE OF THE REPORT:

This report focuses on the Variable Frequency Drives in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Growing infrastructure and manufacturing sectors are expected to be the major growth drivers for the low voltage VFD market. Medium voltage drives function at slightly higher voltages than low voltage VFDs. By nature of this property, medium voltage drives consume less electricity as compared to their low voltage counterparts. Equipment used in industries such as mining, oil and gas, and power generation function at high voltage levels. The manufacturing sector was the largest consumer of variable frequency drives globally, accounting for 29.4% of the global share in 2017.

The worldwide market for Variable Frequency Drives is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
