Variable Gain Amplifiers (VGA) Variable gain amplifiers (VGAs) are used in a variety of remote sensing and communications equipment. Applications ranging from ultrasound, radar, lidar, wireless communications, and speech analysis have utilized variable gain in to enhance dynamic performance.

SCOPE OF THE REPORT:

Increasing usage of variable gain amplifiers in various applications, such as radar and wireless communication, to enhance the dynamic performance is the major factor fuelling the growth of the variable power amplifier market. Variable gain amplifiers are used in a variety of remote sensing and communication equipment and thus, the demand for variable gain amplifiers is increasing rapidly. Also, growing use of handheld gadgets for different applications is creating potential growth opportunities for the variable gain amplifiers market. Variable gain amplifiers are amplifiers that are capable of signal conditioning and whose voltage can be set electronically. Variable gain amplifiers can be controlled through analog voltage, which in turn, can be controlled using a direct current (DC) source, functional source or through digital to analog converters.

The worldwide market for Variable Gain Amplifiers (VGAs) is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
