The global drilling machine market is driven by rising demand for automatic drilling machines and rapid growth in the industrial production sector. Furthermore, due to the continuous growth of the industrial sector, the number of workshops using drill machines is also increasing. The global drill press market is being driven by this, with most of the machine tool manufacturers in-building drill presses in small companies as a subcontracted job as compared to standard equipment. Drilling machines are widely used by small businesses across the globe and the drilling machine market is growing continuously. Drilling machines are expected to grow in popularity owing to growing demand from end-user businesses such as non-residential and residential, and increasing infrastructure construction. Additionally, the growing demand for metal products and advancement in heavy equipment are likely to drive the target market forward. Drilling activity is also increasing, as is the availability of drilling equipment of various sizes and power capacities, providing new avenues for growth in the target market. Advances in machine technology and government initiatives regarding machine tools are expected to bring lucrative growth opportunities to the market. Additionally, as environmental concerns and fossil fuel reserves grow, governments and regulatory organizations are working to increase automation across industries. Following recently

discovered trends in target markets, manufacturers are working on combining 3D printing with precision drilling technology. 3D printers focus on reducing material consumption and development costs, and technological breakthroughs such as milling machines and drilling machines are gradually being used by product type industries that require the mixing and grinding of liquid and solid substances, which may provide huge market prospects.
