## Abstracts

Vascular graft or vascular bypass is a surgical procedure for redirecting blood flow between organs by reconnecting the blood vessels. The procedure is performed to treat a diseased artery to facilitate normal blood flow. It is performed to treat ischemia (also known as abnormal blood flow) for providing the vascular access for hemodialysis patient. Often an autograft is also preferred to provide the vascular access. Grafts are made of teflon, dacron, and allograft.

### SCOPE OF THE REPORT:

This report focuses on the Vascular Grafts in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa.
