Abstracts

The global Vascular Guidewires market size is expected to reach \$ 2865 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Vascular guidewires are used in interventional procedures in guiding the catheters to target specific site for treatment. The growing older population is a major contributor to the growth of the market. WHO estimates that about two billion people will be aged 60 and above by 2050. The older adult population is susceptible to chronic diseases, and thus requires frequent care at healthcare facilities. The percutaneous transluminal coronary angioplasty (PTCA) is the most widely used procedure in which guidewires are extensively used followed by angioplasty.

The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

This report studies the global Vascular Guidewires production, demand, key manufacturers, and key regions.
