According to our (Global Info Research) latest study, the global VCI Anti Rust Paper market size was valued at USD 142 million in 2023 and is forecast to a readjusted size of USD 175.4 million by 2030 with a CAGR of 3.1% during review period.

Volatile corrosion inhibitors (VCI) are a type of corrosion inhibitor that are used to protect ferrous materials and nonferrous metals against corrosion or oxidation where it is impractical to apply surface treatments. They slowly release compounds within a sealed airspace that actively prevents surface corrosion. A typical application is to protect stored tools or parts inside bags, boxes or cupboards, one advantage of VCIs being that if the container is opened and reclosed, levels of inhibitor will recover.
