VDCI digital therapeutics refers to a specialized form of digital intervention designed for individuals with vascular disease-induced cognitive impairment, which is a range of cognitive dysfunctions resulting from brain damage caused by impaired blood flow to the brain, such as stroke, cerebral hemorrhage, vascular narrowing, or long-term vascular damage. This condition encompasses a spectrum from mild cognitive impairment to severe dementia, manifested by symptoms like mental confusion, difficulty concentrating, impaired organizational skills, unsteady gait, and memory loss, significantly affecting the individual's daily living abilities and quality of life. VDCI digital therapeutics leverages personalized digital platforms and advanced cognitive training technologies to mitigate these symptoms, aiming to maintain or restore cognitive functions, and is characterized by its non-invasive nature, high level of personalization, and ease of acceptance by patients, serving as an important complement to traditional therapeutic approaches.
