## Abstracts

According to our (Global Info Research) latest study, the global Vebreltinib Enteric Capsules market size was valued at US\$ 3.85 million in 2025 and is forecast to a readjusted size of US\$ 30.13 million by 2032 with a CAGR of 34.6% during review period.

Vebreltinib enteric capsules are designed to provide targeted therapy for patients with MET exon 14 skipping mutations, a key oncogenic driver in non-small cell lung cancer (NSCLC) and other malignancies. As a selective MET receptor tyrosine kinase inhibitor, Vebreltinib effectively blocks MET signaling pathways, inhibiting tumor growth, proliferation, and metastasis.

In November 2023, Vebreltinib received conditional approval for the treatment of metastatic patients with MET Exon14 Skipping non-small cell lung cancer (NSCLC) from the NMPA. In China, the development rights for Vebreltinib Enteric Capsules are held by Purunao Biotech. In December 2021, Avistone announced the acquisition of Purunao Biotech, integrating Vebreltinib into its research and development pipeline. Outside mainland China, Hong Kong, and Macau, the development rights for Vebreltinib are owned by Apollomics. It is still in the clinical trial stage and has not yet been commercialized in the United States. If all goes well, it is expected to be approved by the FDA in the next few years.

At present, Vebreltinib enteric capsules have established a clear foothold in the Chinese pharmaceutical market by addressing key unmet needs in MET exon 14 skipping NSCLC and PTPRZ1-MET fusion-positive glioblastomas. As one of the first MET-targeted therapies approved in China, it has shown superior efficacy compared to

existing options and has gained strong acceptance among clinicians. Its inclusion in the National Reimbursement Drug List (NRDL) significantly boosts patient access and accelerates market penetration, reinforcing its role as a leading precision oncology therapy.

Looking forward, Vebreltinib is rapidly advancing toward broader indications such as MET-amplified NSCLC. Its priority review status and active clinical pipeline position it as a central agent in China's evolving precision oncology landscape. Coupled with favorable healthcare policies that support innovative drug access and expedited regulatory review processes, Vebreltinib stands to benefit from an environment that actively promotes novel targeted therapies. This alignment between scientific innovation and policy support creates a strong foundation for long-term commercial success.

Nonetheless, the market presents challenges. The relatively small patient population with MET-driven mutations limits the addressable market. Furthermore, the emergence of global competitors?such as Capmatinib and Tepotinib?poses a threat should they enter the Chinese market. Internationally, Vebreltinib has yet to achieve commercialization, with clinical trials still underway and regulatory approvals pending. Therefore, its global expansion hinges on successful regulatory milestones, particularly FDA approval. Continued clinical validation, strategic regulatory navigation, and the establishment of global commercialization partnerships will be critical for sustaining future growth beyond China.
