According to our (Global Info Research) latest study, the global Vector Control Frequency Inverters market size was valued at USD 556.7 million in 2023 and is forecast to a readjusted size of USD 833.3 million by 2030 with a CAGR of 5.9% during review period.

A frequency inverter is an electronic device which enables the conversion of an electrical variable 'current'. In this case, the frequency inverter transforms an AC current with a certain (fixed) frequency into a voltage with variable amplitude and frequency. Vector control is any method to limit or eradicate the mammals, birds, insects or other arthropods (here collectively called 'vectors') which transmit disease pathogens. The most frequent type of vector control is mosquito control using a variety of strategies.
