Abstracts

The global Vegetable Parchment market size is expected to reach \$ 1015 million by 2032, rising at a market growth of 2.8% CAGR during the forecast period (2026-2032).

Vegetable parchment (paper) is made by passing a waterleaf (an unsized paper like blotters) made of pulp fibers into sulfuric acid. The sulfuric acid hydrolyses and solubilises the main natural organic polymer, cellulose, present in the pulp wood fibers. The paper web is then washed in water, which stops the hydrolysis of the cellulose and causes a kind of cellulose coating to form on the waterleaf. The final paper is dried. This coating is a natural non-porous cement that gives to the vegetable parchment paper its resistance to grease and its semi-translucency. Vegetable parchment is used in textile, food packaging, baking, technical laminates etc.

The market for Vegetable Parchment is fragmented with players such as Ahlstrom, Corex Group, Pudumjee Group, BRANOpac, Taian Baichuan Paper, Tanco, Dispapali, Scan Holdings, McNairn Packaging, AMOL Group, Tianming Paper, The Foodwrap Co, Morvel Poly Films, and so on.
