Abstracts

The global Vegetable Protein market size is expected to reach \$ 42650 million by 2032, rising at a market growth of 11.2% CAGR during the forecast period (2026-2032).

Vegetable protein refers to the proteins extracted from plants like soybean, wheat, rice, pea, etc. The protein is an important component of human cells, consisting of monomers called amino acids. Vegetable protein is an alternative to animal protein and it can be absorbed easily. Protein is important to human body. Most people require about 0.8 grams of protein per kilogram of body weight, or about 58 grams of protein per day for a 160-pound adult.

The difference between the animal protein and vegetable protein lies in the amino acid content. Animal proteins are called complete proteins because they contain all essential amino acids. Animal protein has the amino acids that the body is unable to synthesize and must be included in the diet to allow for the proper conduct of protein synthesis. Vegetable protein composition does not provide all the amino acids. Unlike animal proteins, vegetable proteins are low in fat and produce nitrogenous waste, which is the waste products of proteins, which should be less harmful to avoid overloading the kidneys.

Global Vegetable Protein key players include Danisco(DuPont), ADM, CHS, Manildra Group, Gushen Biological, etc. Global top five manufacturers hold a share over 30%.

China is the largest market, with a share over 35%, followed by North America and Europe, both have a share about 50%.

In terms of product, Wheat Protein is the largest segment, with a share over 40%. And

in terms of application, the largest application is Feed, followed by Bakery Food Ingredients, Nutrition Health Care Products, etc.
