## Abstracts

Soy protein isolate is a protein powder obtained by immersing soybean meal (excluding oil and water-soluble non protein components) in an alkaline solution under low temperature conditions, then precipitating, washing, and drying to obtain a protein content greater than 90%. Its structure and properties basically replace pure soybean protein. There are nearly 20 types of amino acids in soy protein isolate, which contain essential amino acids for the human body. It is nutritious and cholesterol free, making it one of the few plant protein varieties that can replace animal protein.
