Abstracts

AC recovery machines work by creating a vacuum between the recovery machine and the manifold or valves on your air conditioning system. This allows your recovery machine to remove all the Freon from your vehicle, run it through a filter, and place it in a storage tank. Recovery machines are used to remove refrigerant from cooling systems such as freezers or air conditioning (AC) systems. The benefits of recovery machines can include removing impurities, recycling, and recharging during service technician maintenance and repairs.
