Abstracts

The global Vehicle Air Suspension Pump and Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Air pumps are also called air suspension air pumps, chassis lift air pumps, and shock absorber air pumps. When the vehicle is raised, the shock absorber air pump motor works to drive the piston to work, the piston sucks the air from the outside to the inside and compresses it. After the compression is completed, it is dried by the dryer and discharged to the distribution valve through the main air channel. The four holes after the distribution valve work are respectively sent to the four shock absorbers, and the vehicle body is raised.

This report studies the global Vehicle Air Suspension Pump and Motor production, demand, key manufacturers, and key regions.
