According to our (Global Info Research) latest study, the global Vehicle Aluminum Extrusions market size was valued at USD 25260 million in 2023 and is forecast to a readjusted size of USD 26290 million by 2030 with a CAGR of 0.6% during review period.

Aluminium extrusion is a technique used to transform aluminium billets into objects with a defined cross-sectional profile for a wide range of uses. In the extrusion process, heated aluminium billet is forced through a die. Extrusions can be manufactured in many sizes and in almost any shape. The extrusion process makes the most of aluminium's unique combination of physical characteristics. Its malleability allows it to be easily cast and machined. Aluminium is one-third the density of steel but has the same stiffness, so the resulting products offer strength and stability, particularly when alloyed with other metals.

Global key players of vehicle aluminum extrusions include Hydro, APALT, Constellium, UACJ, Kaiser, etc. The top five players hold a share over 15%. Europe is the largest market, has a share nearly 34%, followed by Asia Pacific, and North America, with share 33% and 27%, separately.
