The global Vehicle Brake System market size is expected to reach \$ 1329.5 million by 2029, rising at a market growth of 11.0% CAGR during the forecast period (2023-2029).

The car braking system is a series of special devices to slow down or stop a moving car, or keep a car running downhill at a stable speed, and to keep a stopped car stable.

The key system to ensure the safety of automobile driving. According to the function of the automobile braking system, it can be divided into driving braking system, parking braking system, emergency braking system, auxiliary braking system, specific analysis

as follows:

- (1) Service braking system: a braking system used to slow down or even stop a moving vehicle;
- (2) Parking brake system: a braking system that keeps a stopped vehicle in place;
- (3) Emergency braking system: In the case of failure of the service braking system, the braking system that ensures that the vehicle can still decelerate or stop is called the emergency braking system;
- (4) Auxiliary braking system: During the driving process, the auxiliary driving braking system reduces the speed of the vehicle or keeps the speed stable, but the braking system for emergency braking of the vehicle cannot be called the auxiliary braking system.
