Abstracts

The global Vehicle Fuel Tank market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

Fuel tanks for the trucking industry are generally built for the same applications as those for automotive uses but with larger capacity.

Automotive fuel tank is an important safety and functional part of vehicle. Automotive fuel tank is a separate cabinet assembly fixed in the motor vehicle, used to store fuel. An automotive fuel tank system consists of fuel tank, fuel pipes, fuel tank cap, pipe fittings and other kinds of ancillary equipment. Automotive fuel tank functions for oil storage, heat dissipation, bubble separation and impurities precipitation, etc.

The maximum distance a combustion-engine powered car with a full tank can cover is the product of the tank capacity and its fuel efficiency (as in miles per gallon). While larger tanks increase the maximum distance, they also take up more space and (especially when full) add to the total weight, requiring higher fuel consumption for the same performance. Fuel-tank capacity is therefore the result of a trade-off in design considerations.

This report mainly studies fuel tanks used for truck market.

In North America market, the leading manufactures mainly are Plastic Omnium, TI Fluid Systems, SAG, Proform Group Inc, Alumitank, Martinrea, Standard Technologies, Titan Fuel Tanks, Northside Industries, Propower Mfg, etc.
