Vehicle-mounted millimeter-wave corner radar is a radar sensor that uses the millimeter-wave frequency band (usually between 30GHz and 300GHz) and is installed on the vehicle to detect the surrounding environment. This type of radar measures the distance, speed, angle and other information of the target by emitting millimeter waves and receiving reflected waves, thereby accurately locating and tracking surrounding objects. They can help vehicles achieve blind spot monitoring, lane change assistance, collision warning, automatic emergency braking and other functions.
