According to our (Global Info Research) latest study, the global Vehicle NVH Material market size was valued at USD 21260 million in 2023 and is forecast to a readjusted size of USD 26600 million by 2030 with a CAGR of 3.3% during review period.

NVH stands for noise, vibration, and harshness, and the noise is what the driver and passengers can hear, the vibration is what they can feel and the harshness is how much of an effect thumps, bumps, noise and vibration have on the cabin and its occupants. It is an aggregative indicator with which to measure the quality of automobile manufacturing. As many as one-third vehicle faults are related to the NVH of vehicles.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
