Abstracts

A vehicle tracking system combines the use of automatic vehicle location with software that collects these fleet data for a complete picture of vehicle locations. Modern vehicle tracking systems commonly use Global Positioning System (GPS) or Global Navigation Satellite System (GLONASS) technology for locating the vehicle, but other types of automatic vehicle location technology can also be used. Such information can be viewed on electronic maps via the internet or specialized software.

Scope of the Report:

Government initiatives to implement tracking systems in cars, rise in demand for cars, and innovation drive the market growth. With continuous innovations taking place in the field of sensors, developments are expected to witness a boost and thereby the technology is anticipated to gain prominence.
